SUMMARY

Insight-driven Data Scientist skilled in Python, SQL, Tableau, PowerBI and data visualization, grounded in a diverse background spanning manufacturing leadership, quality control, banking, and design. Specialize in making data feel intuitive and actionable – blending analytical precision with clear communication to uncover patterns, reduce uncertainty, and support confident decision-making. Motivated by work that improves processes, strengthens clarity, and creates measurable business impact.

SKILLS

Python | SQL | Git | GitHub | Data Analytics | Pandas | NumPy | scikit-learn | Statistical Analytics
Data Visualization | Tableau | Power BI | matplotlib | Seaborn | Jupyter Notebook | Advanced Spreadsheets | Machine Learning | NLP | Linear Regression | Data Cleaning

TECH PROJECTS

Machine Learning OilyGiant Profit Analysis | 2025 | Jupyter Notebook

Identified the most profitable region for new oil well development using predictive modeling and risk evaluation.

- **Built** a linear regression model in Python to predict oil well productivity and estimate regional profitability.
- **Cleaned and prepared** large datasets using Pandas to ensure accurate modeling and reduce noise.
- **Evaluated** model performance using RMSE and confidence intervals to quantify uncertainty and guide decision-making.
- **Identified** the optimal region for drilling, supporting a data-driven investment strategy with minimized financial risk.

Data Analytics Customer Churn Analysis | 2025 | Jupyter Notebook

Data analytics project focused on understanding customer behavior, identifying churn drivers, and supporting retention strategies.

- **Analyzed** customer demographics and usage patterns using Python and SQL to uncover churn-related trends.
- **Engineered** meaningful features to improve model interpretability and highlight key behavioral indicators.
- **Visualized** churn patterns using Matplotlib/Seaborn to communicate insights clearly to non-technical audiences.
- **Recommended** targeted retention actions based on data-driven insights to reduce churn risk and improve customer loyalty.

EXPERIENCE

Autoneum, Cell Lead, Norwalk, OH**2022 – 2025****Skills Used:** Leadership, Workflow Coordination, Quality Control

- Improved daily production flow, increasing output consistency by coordinating tasks, assigning responsibilities, and monitoring progress across a 2–5 person team.
- Strengthened product quality by identifying defects early and adjusting processes, reducing rework and supporting smoother operations.
- Enhanced team performance by training new employees on safety, equipment use, and production standards, ensuring reliable and compliant work practices.

Precision Automotive Plastics. Quality Control Inspector & Auditor, Bellevue, OH 2019 – 2022 |**Skills Used:** Quality Inspection, Documentation, Root Cause Analysis

- Ensured automotive parts met strict quality and customer specifications, reducing defect rates by performing detailed inspections and documenting findings accurately.
- Improved manufacturing consistency by identifying recurring issues and communicating root causes to production teams, helping prevent repeat errors.
- Supported continuous improvement efforts by conducting audits and maintaining precise quality records that informed process adjustments.

Croghan Colonial Bank, Teller & Digital Banking Specialist, Clyde, OH 2017 – 2019**Skills Used:** Customer Service, Accuracy, Digital Tools

- Delivered accurate, efficient financial transactions, reducing customer wait times by following precise cash-handling procedures and verifying account details.
- Increased adoption of digital banking tools by guiding customers through mobile and online features, improving their access to self-service options.
- Strengthened customer satisfaction by identifying needs and recommending appropriate banking solutions, helping clients manage their accounts more effectively.

EDUCATION**TripleTen | Data Science Program | 2025 – 2026****Topics Covered:** Python, SQL, Data Cleaning, Exploratory Data Analysis, Machine Learning, Linear Regression, Classification Models, A/B Testing, Statistical Analysis, Data Visualization, Jupyter Notebook
